Can I add specific images and other resources to my Interactive Mini App?

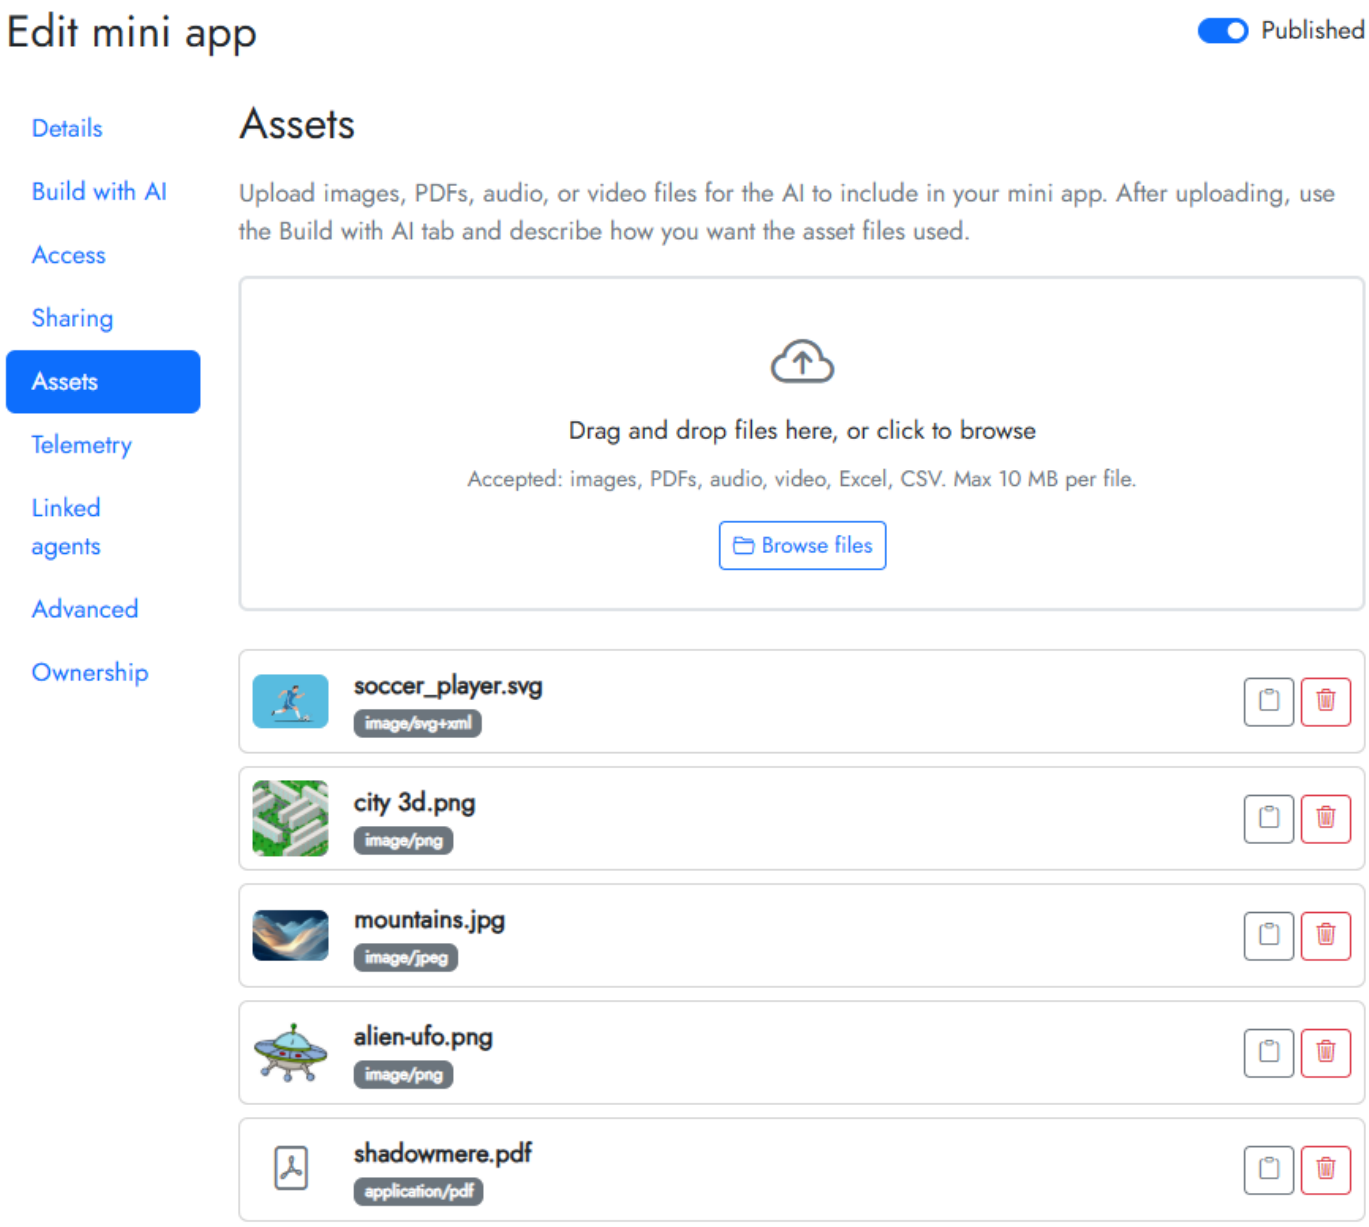

Interactive mini apps · https://cogniti.ai/docs/can-i-add-specific-images-and-other-resources-to-my-interactive/

If you have specific images or files that you need your mini app to draw upon, use, or link to when it runs, you can add them to the mini app's *Assets*.

Uploading assets to your mini app

Click into the *Assets* tab and upload files.

Your uploaded files will appear alongside their filename. Note down their filenames, because you will need to use these when building out your mini app.

Refer to the assets when building your mini app

When chatting with your AI builder in the *Build with AI* tab, you just need to tell it to use the assets you have uploaded. For example:

Build a story starter where students need to pick from one of the four images (soccer, city, mountains, alien ufo) to spark their creativity. After they have chosen, they need to brainstorm some ideas and then you can allow them to download the shadowmere file for further inspiration.

This will create something like this:

Story Starter Builder

Choose a picture, brainstorm bold ideas, then explore the **Shadowmere** text for extra inspiration. The goal is to create a rich story starter you can use in your writing.

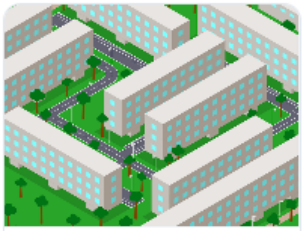

1 Pick an image 2 Brainstorm ideas 3 Extra inspiration

1. Choose a picture that could start a story

Look at each image. Click the one that gives you the most interesting story idea.

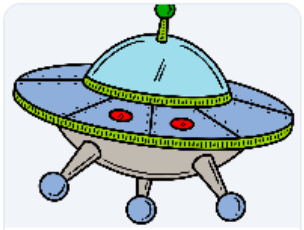

The Final Match

Night in the City

Lost in the Mountains

The Night They Arrived

Click a picture to select it. You can change your mind later.
